

**Betta.Haul Products** is a newly established Australian company offering product solutions for the transportation and warehousing industries, by innovation and design.

Introducing Betta Haul's, engineered load support system **HaulSafe** which easily fits onto all flat tray trucks. Designed to minimise the risk of accidents caused by the movement of loaded goods falling from vehicles and also load shift during transit. Load shift is a well-known contributor towards road accidents when stability is altered on a loaded vehicle, resulting in uncompromised vehicle dynamics.

**Betta Hauls** patented load support system **HaulSafe** is engineered using highly durable 12Mpa virgin rubber (no reclaim used), specifically formulated to improve upon traditional hardwood by:

- ✓ **Anti-slip (High Friction)**, as a guide, an increase of up to 80% in dry conditions.
- ✓ **Noise and Vibration reduction**, when transporting goods.
- ✓ **Minimise vehicle inertia** under sudden braking conditions.
- ✓ **High load rating** tested at applied forces of up to 5 tonnes using an 180mmDia ram certified under NATA testing conditions.
- ✓ **Will not absorb or retain liquids.**
- ✓ **Minimise roll affect**, using trapezoidal design.
- ✓ Ability to **add accessory attachments** to suit your haulage, such as Clevis assembly, support clamp, and coming soon: pin caddies and our unique TPU retaining pins.

*With safety in mind call  
Betta Haul Products to  
discuss your needs.*

Australian innovators  
of Anti-Slip load  
support system,  
**HaulSafe** used in  
Transportation and  
Warehouse industries.
